EDUCATION

Northeastern University • Boston, MA

Expected Class of 2028

Master of Science in Cybersecurity

- *Relevant Courses:* Cybersecurity: Technologies, Threats, and Defenses, Security Risk Management and Assessment

University at Buffalo • Buffalo, NY

December 2025

Bachelor of Science in Computer Science, GPA 3.81; Minor in Mathematics, GPA: 3.83

- *Relevant Courses:* Computer Security, Software Security, Software Engineering development process, Software Quality in Practice, Web development, Data Structures, Algorithms, Assembly Language Programming, Discrete Structures, Machine Learning, Software Project Management.
- *Honors:* Summa Cum Laude, Dean's List (all semesters), Recipient of the "Pride of NY Scholarship".

CERTIFICATIONS

CompTIA Security+ February 2026 • **CompTIA Network+** May 2026

TECHNICAL SKILLS

Cybersecurity: Endpoint Security & Threat Defense, Incident Response, Threat Detection

Programming Languages: Python, Java, C, JavaScript, SQL

Web Technologies: HTML, CSS, React

Databases: MongoDB, PostgreSQL

Tools & Platforms: Linux, Wireshark, Git

EXPERIENCE

Massachusetts Office of the State Auditor • Boston, MA

June 2026 – Present

Software Engineering Intern • Information Technology

- Developed Python-based data pipelines to automate the collection, validation, and processing of Massachusetts agency and audit data from government websites.
- Designed and implemented web scraping workflows that extracted structured information from 200+ government webpages, reducing manual data collection.
- Contributed to the development and evaluation of an internal AI-powered audit research platform by assessing response accuracy, citation quality, retrieval performance, and multi-agency query behavior.
- Identified and documented functional and security issues through systematic testing, including AI hallucinations, prompt injection vulnerabilities, retrieval errors, and multi-agency search inconsistencies.
- Collaborated with AI consultants and software engineers in an Agile environment to enhance internal AI tools supporting audit operations and knowledge retrieval.

AI Republic • Seattle, WA • Remote

July 2025 – October 2025

Software Engineer Intern • Data Analytics

- Developed a database context system that converts schema and metadata into structured JSON, enabling LLMs to provide accurate, context-aware query responses.
- Implemented a data analytics feature in a Chrome extension that connects to and analyzes user databases, automatically generating executable SQL queries and summarizing results from natural language input.
- Collaborated with a 3-member agile team to design, build, and test user flows, ensuring high-quality code, seamless UX, and strict data privacy.

Software Quality in Practice (CSE 306LLB)

August 2024 - December 2025

- Delivered office hours and lectures to 70+ students on advanced debugging tools (GDB, gprof, gcov, Callgrind, Git), improving their code analysis skills and debugging proficiency.
- Mentored 20+ student teams in applying software quality techniques to real-world debugging challenges, resulting in improved code accuracy and understanding of collaborative development.
- Facilitated 2 weekly lab sessions for 20+ students, offering firsthand assistance and fostering interactive peer learning; consistently received positive feedback on teaching effectiveness.

Software Engineering (CSE442LLB)

August 2025 - December 2025

- Conducted office hours for 200+ students, guiding them with understanding Agile Principles and good Software Engineering practices for their projects.
- Facilitated 40+ teams in developing web applications that utilize PHP for backend development and a frontend framework of their choice (e.g., React, HTML, Vite).
- Mentored students on collaboration tools (e.g., Github, Scrum boards), strengthening team-based problem solving, project coordination, and technical communication.

RESEARCH EXPERIENCE

University at Buffalo • Buffalo, NY

August 2024 - December 2024

Undergraduate Researcher

- Assisted on GraSPI, a graph-based structure property identifier software that computes a library of descriptors, supporting over 1,000,000 nodes, for segmented microstructures and organic solar cells performance.
- Converted GraSPI software from C++/C to Python, evaluating and selecting from 4 different graph-based libraries based on performance and compatibility.
- Spearheaded strategy sessions and contributed to the design and testing process within a 5-member team to ensure accurate translation and validation of the software's core functionalities.
- Awarded second place among 80+ teams at the University at Buffalo's 13th Bi-annual Computer Science and Engineering Demo Day for innovative project presentation and teamwork; event sponsored by M&T Bank and UB Department of Computer Science.

TRAINING

Google Cybersecurity Certificate

Foundations of Cybersecurity, Manage Security Risks, Networks and Network Security, Linux and SQL, Assets, Threats and Vulnerabilities, Detection and Response.

Cyber Incident Response Specialization Certificate

Intrusion Detection and Prevention, Networking Monitoring, Malware Protection, Data Security, Endpoint Detection and Response, Network Security, Threat Detection, Incident Response

Mastering Endpoint Security & Threat Defense Certificate

Cyber Threat Hunting, Threat Detection, Endpoint Security, Hardening, System Monitoring, Intrusion Detection and Prevention, Zero Trust Network Access, Authentications, Threat Management
